

The answer key is wrong. **Nobody checked.**

Cekgu reviews a quiz before learners sit it.

● Two models, key withheld

● Every reading receipted

● Refuses on disagreement

1. PROBLEM STATEMENT

A quiz goes out with the wrong answer marked. **Every student loses that mark.**

Teachers set multiple-choice quizzes with an answer key. When the key is wrong, nobody finds out until the marks are in. Cekgu checks the key first.

HOW A WRONG KEY GETS CAUGHT TODAY

The teacher re-reads it	Anchored to the key she already believes.
A colleague re-solves it	An expert's hour, every single time.
She asks a chatbot	One opinion, and no proof it did not just agree with her.

ONE FROM OUR SAMPLE QUIZ

Which data structure removes elements in first in, first out order?

SUPPLIED KEY CORRECT ANSWER

A • Stack

B • Queue

Possible Key Error

Universities already vet exam papers by committee because this is real. **Cekgu is the check that runs before the committee, on every quiz, in minutes.**

UITM FINAL-EXAMINATION GUIDANCE

1. PROBLEM STATEMENT • THE USER

Meet Cikgu Farah. A private computer science tutor in Bukit Jalil.

She sets twelve-question quizzes several times a month. When her answer key is wrong, her students lose marks.

F

Cikgu Farah, 34

PRIVATE TUTOR • COMPUTER SCIENCE • BUKIT JALIL

PUBLISHES

Twelve items, several times a month.

ACCOUNTABLE FOR

Every item a learner challenges.

WANTS

A second pair of eyes. Not an AI author.

DEVICE

Laptop to write. Phone to check.

“Which three questions should I look at again, and why?”

- IN →

She types each question into the **New Check** form: the question, its two to six options, and a tick on the one she marks correct. **No file to upload.**

One item at a time • validated before any model runs • paste and CSV import after submission
- Her record exists in under a second.** She closes the laptop. It keeps checking.

Every item verdicted within five minutes, nineteen times in twenty
- OUT →

Every item with a verdict, the risky ones first. Two readings each, with a request id. Her decision beside the verdict, never over it.

- ~~She re-reads all twelve herself.~~

→ She reads the three that came back different.
- ~~A colleague re-solves the paper.~~

→ Two models re-solve it without the key, with receipts.
- ~~She hears about a wrong key after the marks.~~

→ She hears before the quiz goes out.

2. PROJECT OBJECTIVE

Spend human attention **where it matters.**

Cekgu uses two separate AI models on GonkaRouter to audit every answer, so the educator only reads the ones that came back flagged instead of all of them.

TWO MODELS RE-SOLVE EVERY ITEM, KEY WITHHELD **12**

Possible Ambiguity

9 items

Clear

3. OVERALL CONCEPT

Two GonkaRouter models answer each question without seeing the key. **A fixed rule compares them.**

Neither model is shown the teacher’s answer or the other model’s. The rule checks whether the two agree first, and only then whether they agree with the key.

THE ITEM AS SUBMITTED

Which data structure removes elements in first in, first out order?

Your key is withheld.

TWO GONKAROUTER MODELS, KEY WITHHELD

MiniMax-M2.7

Queue

=

Kimi-K2.6

Queue

≠

THE SUPPLIED KEY

Stack

CHECKED IN THIS ORDER

- 1

Unverified

fewer than two verified readings
- 2

Split Opinion

the two answers differ
- 3

Possible Ambiguity

both list more than one option
- 4

Clear

the shared answer is the key
- 5

Possible Key Error

the shared answer is not the key

3. OVERALL CONCEPT · THE MOMENT

Nobody told them the key. Both chose Queue.

Question 3 of the public sample record, exactly as it came back.

Which data structure removes elements in first in, first out order?

SUPPLIED KEY

- A
- B
- C
- D

Stack

MiniMaxAI/MiniMax-M2.7

- A
- B
- C
- D

Queue

RECEIPT

Verified

moonshotai/Kimi-K2.6

- A
- B
- C
- D

Queue

RECEIPT

Verified

Possible Key Error

Both readers chose Queue. The supplied key is Stack.

The supplied key says Stack.

Cekgu asks a human to look. It changes nothing.

RULE FIRED

Two verified readings agree on a non-key option.

3. OVERALL CONCEPT · THE PROOF

Every reading carries **a request id.**

Each reading is tied to a GonkaRouter receipt anyone can fetch. A reading without one never enters a verdict.

PUBLIC SAMPLE RECORD · QUESTION 9

SERVED MODEL

MiniMaxAI/MiniMax-M2.7

REQUEST ID

req-1788427238422211326-414866

RECEIPT

Verified

SERVED MODEL

moonshotai/Kimi-K2.6

ASK THE GATEWAY YOURSELF

`api.gonkarouter.io/v1/receipts/
req-1788427238422211326-414866`

No key, no login. Anyone in this room can open it now.

Both ids are on the public sample record. Neither reading counts without one.

```
"model": "MiniMaxAI/MiniMax-M2.7",  
"outcome": "success",  
"status_code": 200,  
"duration_ms": 30867,  
"created_at": "2026-09-03T09:21:09Z",  
"x_devshard_id": "70340"
```

4. TECHNOLOGY AND TRACK

One process. One gateway. Two models.

One Bun process, one gateway, four calls in flight, and a rule you can read off the screen.

STACK	
Browser	React 19, Vite
Server	Bun, Hono, worker in the same process
Data	Postgres on Neon, Drizzle
Host	Cloud Run

WHEN THE GATEWAY IS SLOW	
Hedge at 45 s	a duplicate call to the same model, first answer wins
Cutoff at 90 s	the call is aborted and recorded with no request id
3 attempts per family	then the item is Unverified, never guessed

ASSERTED EVERY RUN

only-gonkarouter.test.ts

No other AI provider exists anywhere in the code. A judge can grep for it.

5. MOTIVATION AND CHALLENGES

Two independent models on every item. Built to wait for both.

Two models on GonkaRouter give every verdict redundancy and a check against a single model’s hallucination. A second reading takes time, so the queue does the waiting and the educator does not.

So Cekgu queues the work, retries, and fails closed.

12 of 12

items, two verified readings each

PUBLIC SAMPLE RECORD

5 abstained as Unverified. 1 came back Clear.

SECONDS TO A COMPLETED CALL • 3 SEP BENCHMARK

30-ITEM EVALUATION SET • RUN TWICE THROUGH THE DEPLOYED QUEUE

6. BUSINESS MODEL

We charge for questions checked. **Not tokens.**

Priced by questions checked, so the educator never sees a model bill.

FREE 20 questions checked per month RM0	CEKGU PLUS 300 questions checked per month RM29 / month	CEKGU STUDIO 1500 questions checked per month RM79 / month
---	---	--

The educator never sees a model bill. **Pilot pricing, and no buyer has paid yet.**

AFTER SUBMISSION, IN THE ORDER THE SCOPE LADDER PLACES THEM
